User Guide - Talent & Learning Analytics Dashboard

For HR, Talent and Learning & Development users. The dashboard covers 1,470 employees (IBM HR sample data, fictional) at one point in time.

1. Open the dashboard

- Open `03_PowerBI/Talent_Learning_Dashboard.pbip` in Power BI Desktop (or a `.pbix` copy if you were sent one).
- If the visuals are empty, click **Home -> Refresh**. If the refresh cannot find the files, set **Home -> Transform data (drop-down arrow) -> Edit parameters -> ProjectFolder** to the project folder and refresh again.

2. The pages

Page	Use it to
Overview	How big is attrition and where is it concentrated?
Insights & Actions	What should HR do about it?
Attrition Drivers	Which groups leave most?
Training & Learning	Who gets trained, and does it relate to attrition?
Satisfaction & Performance	Do satisfaction and performance ratings relate to attrition?
Job Role Summary	Which roles need attention first?
Employee Details	Who exactly is in this group? (drill-through)
Data Quality	Can I trust the numbers? (self-tests, recalculated on every refresh)

3. Filter, highlight and drill through

- **Slicers:** use the **Department** and **Job role** drop-downs at the top right of each analysis page. Hold **Ctrl** to select several values. To clear a slicer, hover over it and click the eraser icon (**Clear selections**).
- **Cross-filter:** click a bar to filter the other visuals on the same page; click it again to undo.
- **Drill through:** right-click a job role (a bar or a row in the Job Role Summary matrix) -> **Drill through -> Employee Details**. The page shows the employees of that role with their status, tenure, training and income.
- **Back button:** the arrow at the top right of Employee Details returns to the page you came from. In Power BI Desktop, **Ctrl+click** it; in the Power BI service a normal click works.
- **Tooltips:** hover over any bar to see its exact value.

4. KPI definitions

KPI	Definition	Company value
Headcount	Employees in the current selection (leavers included)	1,470
Leavers	Employees who left	237
Attrition Rate	Leavers / Headcount	16.1%
Attrition vs Company (pts)	Selected attrition rate minus the company rate; positive = worse than the company	0.0% (company); +23.6% for Sales Representatives
Avg Tenure (Years)	Average years at the company	7.0
Early Tenure Attrition Rate (0-1 yrs)	Attrition rate of employees in their first 0-1 years	34.9%
Training per Employee	Trainings attended last year / Headcount	2.80
% No Training	Share of employees with no training last year	3.7%
Overtime %	Share of employees who work overtime	28.3%
Overtime Attrition Ratio	Attrition with overtime / attrition without overtime	2.9x
% Low Job Satisfaction	Share of employees rating job satisfaction Low (1 on a 1-4 scale)	19.7%
Avg Work-Life Balance	Average rating from 1 (Bad) to 4 (Best)	2.76

All values change with the slicers, except the company baseline used by *Attrition vs Company (pts)*. Full list of measures and their DAX: `03_PowerBI/model/DAX_Measures.md`.

5. Read the numbers carefully

- **Associations, not causes.** The data is a snapshot; use the findings to choose pilots, not as proof.
- **Small groups move a lot.** For example, only 54 employees had no training and 83 are Sales Representatives - one person more or less changes their rate noticeably.
- **No dates.** There are no trends over time; every page shows the same moment.
- **Data Quality page:** if any of the 35 checks shows FAIL after a refresh, do not use the numbers until the data is fixed.

6. Page layout at a glance

Every analysis page follows the same layout: title and slicers at the top, KPI cards below them, charts underneath - read left to right.
